Discussion  
moderated by  
**Peter Sylwan**

Climate change, COVID pandemic, and war in Europe all slowed global supply chains, resulting in worldwide food shortages. Crop production is hampered by high energy prices and unpredictable weather. It is more than necessary to find innovative, resilient solutions to ensure food security for all!

Join us for a discussion on food production and consumption in times of crisis on **May 9th** at **15:15** in the Auditorium "Forum" of **Ideon Alpha in Lund** or online! More information is available at: [www.plantlink.se](http://www.plantlink.se).
